E-Integration of Literature, Writing skill and Real Life Based Projects in English for Higher Secondary Classes

This paper emphasizes on the **Pro –technological** approach towards the teaching of English text in the Higher secondary classes. The prescribed text can be a platform to develop the writing skills of the students which is nurtured through the project work given to them. The Project work given should be accountable to real life situation, which in turn creates a readiness strategy for the students to deal with day-to-day situations. Indirectly the subject prepares the students not only to enhance the knowledge but also prepares them for life through a technological approach thus making them techno savvy.

The main **Objectives** of this project are:

- To create a conducive pro –technology environment in the class so as to teach and learn the English language in such a way that the beauty of the language is not being dissected.
- To encourage the teachers to come out of the orthodox way of teaching and embrace **techno- based methodology** for a joyful teaching-learning process. How the teacher can be a **facilitator** for the learners so that inquiry- based learning can be promoted in the learners.
- To create a platform for the academic growth of the learner as well as the teacher.

The teacher after facilitating the learning process in the students with the help of **Role play, Point Presentations** and other **Audio aids** tries to lighten the spark of creativity in the students by introducing Projects for students, which are extensions of the lesson but related to **real life situations**. The students after the completion of the **E- projects** which are in form of **interviews, brochures, pamphlets** etc.will be directed to conduct a peer group discussion/debate on the prepared projects and the message /conclusion will be a **value added message** for the other students and community.

E- projects:

Instead of giving the students conventional type projects like making files or some other chart work E project is a new concept which makes the students in par with the new techno savvy world. The students will be assigned the ‘real life based projects’ in such a way that all the work given to them like preparation of brochures, pamphlets, newsletter,Interviews etc(which are given as a part of project work) will be done on computers with the help of MS Publisher ,MS Powerpoint ,MS

Word etc. The students can also have an interactive educational portal wherein they can interact and share their projects with other students. The student will maintain his or her folder for the entire session and all the projects will be saved in that particular folder. When the students prepare projects in such a manner then they will automatically make use of Internet, Encarta and other educational soft wares, which will make their project work more interesting.

The entire proposed project is carried out in two parts in the form of Power Point Presentation:

1. The ways teachers should adopt to make the English subject goes techno savvy while teaching Drama, Prose and Poetry, at the same time interlink the themes of the lesson taught to real life situations so as to introduce real life based projects to the students, which in turn can develop their writing skill.
2. An example of a lesson (Albert Einstein at School (Class XI Supplementary Reader) carried out in the same format.

The outcome:

1. The students enhance their ability to deal with real life situations and also to link a particular theme to the Contemporary situation.
2. The students develop the art of interviewing, preparing brochures, posters etc.
3. The projects submitted are all E projects this will enable the students to work on WORD, EXCEL and PUBLISHER. There is a joyful learning atmosphere, which make the students traverse through the modern technology.

N.B. The procedure is well explained in the power point presentation submitted along with this
